

AQUA 50

HYDROGEN PEROXIDE BASED DRINKING WATER TREATMENT

Kilco Aqua 50 is a highly effective oxidising water treatment based on Hydrogen Peroxide. Can be widely used for Agricultural biosecurity applications also in Aquaculture and the Dairy Industry.

- Effective removal of biofilm.
- Readily biodegrades to harmless by-products.
- Removes organic deposits.

RECOMMENDED USAGE

Animals present: Maintenance dosing of water lines

Under advice from your local Kilco representative dose Aqua 50 between 0.005% - 0.02% (25ppm – 100ppm H₂O₂) from the original container via a metering pump suitable for dosing H₂O₂. Alternatively, make up a stock tank solution at between 0.5% - 2% and further dilute into drinking water line via a fixed 1% volumetric dosing unit to give a point of consumption dilution in the 25ppm to 100ppm H₂O₂ range.

It is important to empty and replenish stock tank solutions on a regular basis and also to cover stock tank with a fitted lid to protect solution from environmental contamination.

Withdraw dosing 24 hours prior to and 12 hours post live vaccine treatments.

Advice: Consult with your local Kilco representative for specific application recommendations.

Test method: Use Hydrogen peroxide test strips on a regular basis to check and monitor residual H₂O₂ at point-of-consumption.

Storage: Store upright in original container in a cool, well ventilated area away from sources of ignition, alkalis, acids and oxidising substances.

Pack size: 10 litres.

Shelf life: 1 Year from date of manufacture.
